🏠 8 rue Henri Matisse
Domaine des Gâtines
Plaisir 78370

📅 Date of birth 04/13/2003

🚗 Driver's license
Coastal boating license

🚗 Personal vehicle

☎ 0695592844

A Languages

French Native language

English B2 (TOEIC 870)

German B1

Korean A2

Japanese Equivalent to JLPT N5

👥 Interests

Karate Practiced Karate from 2008 to 2015 and obtained a brown belt.

Sailing Annual sailing practice in a competition team on LASER support from 2018 to 2022.

Music

- Playing French horn since 2011
- Principal French horn of the Saint-Quentin-en-Yvelines Orchestra since 2018

International Travel Exploring different countries and cultures

★ Skills

Languages : Python, C, C++, VHDL, SQL

MATLAB Simulink, Solidworks, Catia

ROS2, DDS-XRCE, Embedded Systems, ARM Cortex-M

Docker, Git, Linux, Cloud Computing, DevSecOps, AIOps, Architecture

PyTorch, TensorFlow, Machine Learning, Deep Learning, Computer Vision, RL, LLMs, MCP, RAG

Teamwork, Project Management, Leadership, Autonomy

About Me

Final-year dual-degree engineering student specializing in Artificial Intelligence at CentraleSupélec and in Embedded Systems and Telecommunications at IPSA (Institut Polytechnique des Sciences Avancées).

Graduating in November 2026 upon completion of my final internship, I am seeking a full-time opportunity in AI, Robotics, Embedded Systems, Computer Vision or Intelligent Systems.

Education

From 2025 to 2026

Master's in Engineering

CentraleSupélec - Université Paris-Saclay Gif-sur-Yvette

Specialization: **Artificial Intelligence** (GPA 4.3/4.5)

Relevant coursework: *Deep Learning, Computer Vision, Reinforcement Learning, Multi-Agent Systems, Explainable AI, NLP, LLMs*

From 2021 to 2026

Master's in Engineering

IPSA - Institut Polytechnique des Sciences Avancées Ivry-sur-Seine

Specialization: **Embedded Systems and Telecommunications**
Ranked 2nd out of 365 students (GPA: 4.45/4.5)

Relevant coursework: *Embedded Systems, ROS 2, Real-Time Systems, Signal Processing, Computer Networks, Sensor Integration*

From Aug. 2024 to Jan. 2025

International Semester

Inha University - 인하대학교 Incheon, South Korea

Electronic Engineering, Robotics, Artificial Intelligence, Computer Vision, and Embedded Systems (GPA 4.25/4.5)

Work experience

From May 2026 to Nov. 2026

Internship – AIOps, DevSecOps & Architecture Consultant

IBM Bois-Colombes, France

Contributing to BNP Paribas' AIOps, DevSecOps and architecture initiatives, focusing on IT operations automation, software observability, application dependency mapping and Architecture as Code. Developing AI-driven automation solutions using Python, APIs, AI agents, and MCP.

From Jun. 2025 to Sept. 2025

Internship – AI Engineer in Target Detection and Recognition

KNDS France Bourges

Developed AI-based defense solutions for target detection, classification and tracking in visible and infrared imagery for a remotely operated turret. Created and enriched image datasets using field acquisitions, 3D simulations and synthetic data. Optimized deep learning models for deployment on embedded platforms.

From July 2024 to Aug. 2024

Internship - Robotics Integration Engineer - ROS2

ARQUUS 15 bis Allée des Marronniers, Camp de Satory, 78000 Versailles

Developed, integrated, and secured ROS 2-based communications for defense ground robots within an R&D laboratory, using DDS, DDS-XRCE, and DTLs, with CAN bus integration for LiDAR data acquisition and transmission.

July 2023

Technician Intern – GAZELLE Helicopter Maintenance

Atelier industriel de l'aéronautique Clermont-Ferrand, France

Performed operational maintenance on GAZELLE military helicopters, including mechanical and electronic systems maintenance and supply chain support.

From Feb. 2022 to Dec. 2025

Project Leader

Association Script Ivry-sur-Seine, Île-de-France, France

Led the end-to-end development of an AI-powered drone integrating embedded computer vision and speech processing, including the design and optimization of deep learning models for resource-constrained systems.

CentraleSupélec - Some Academic Projects

- **UNet3D Liver & Tumor Segmentation** - Developed a complete 3D medical image segmentation pipeline using PyTorch and MONAI, including data augmentation, sliding-window inference, model optimization, and anatomical post-processing.
- **KyberIA - Intelligent Financial Assistant** - Built a full-stack AI assistant combining a FastAPI backend, React frontend, LangGraph agent, LLM-based intent routing, financial tools, and portfolio construction features.
- **HERMES - Agentic Multimodal RAG** - Designed a multimodal RAG pipeline combining text and visual retrieval, hybrid result fusion, Qdrant vector search, performance evaluation, and LangGraph-based agent orchestration.
- **Multi-Robot Self-Organization in Hostile Environments** - Developed coordination and self-organization strategies for teams of autonomous robots operating in constrained and hostile environments.
- **Slay the Spire Reinforcement Learning** - Developed a PPO-based agent for combat decision-making using a custom simulator, reward shaping, action masking, and iterative policy evaluation.
- **Responsible and Explainable AI** - Evaluated bias, fairness, and explainability in machine learning models across tabular, image, and text datasets using subgroup performance analysis and post-hoc explanation methods.

IPSA - Some Academic Projects

- **GoPicasso Autonomous Drawing Robot** - Developed a mobile robot capable of interpreting SVG files, planning drawing trajectories, and correcting its motion during execution.
- **Image Denoising & Inpainting through Optimization** - Implemented image restoration methods based on Euler–Lagrange equations, conjugate gradient, BFGS, DFP, Tikhonov regularization, and the ROF total-variation model.
- **Orbital Trajectory Calculator** - Developed a Python program to compute satellite trajectories, orbital parameters, velocities, anomalies, and passage times.

Inha University - Some Academic Projects

- **Viola–Jones Face Detection** - Implemented a real-time face detection system using Haar cascade classifiers and positive and negative image datasets.
- **Object Tracking with OpenCV** - Implemented and compared object-tracking approaches using OpenCV APIs on image sequences and video streams.
